

Soumyadeep Ganguly

Advanced Senior Engineer Analyst – DevOps / Java / Cloud

✉ gangulysoumyadeep231@gmail.com [in](#) LinkedIn [SGanguly1999](#) 📍 Kolkata, India

SUMMARY

Advanced Senior Engineer Analyst at Accenture with 3+ years in DevOps, Java development, and cloud engineering. Expert in CI/CD pipelines, AWS infrastructure, Liferay OSGi modules, and enterprise application architecture. Delivered complex migrations and scalable B2B portal solutions.

EXPERIENCE

Advanced Senior Engineer Analyst – DevOps / Java / Cloud

Accenture • July 2022 – Present • Kolkata, India

- Designed a single Docker image promotion strategy across QA, INT, and PROD using ENV variables and a portal configuration override mechanism, eliminating per-environment builds and reducing release complexity.
- Built end-to-end CI/CD pipelines using GitHub Actions — automating Docker image builds, commit SHA tagging, semantic versioning on PR approval, and enforcing release gates that prevented lower-environment deployments while a release PR was open.
- Automated AWS Load Balancer rule updates as part of the deployment pipeline using Terraform, reducing manual intervention during releases and ensuring consistent infrastructure state across environments.
- Developed AWS Lambda functions to handle application failover: one Lambda detects ECS service degradation and reroutes ALB traffic to a static fallback page; a second Lambda automatically restores routing once the cluster recovers.
- Integrated AWS Athena to query application metadata from a Data Lake, enabling a real-time data sync feature within a B2B portal.
- Led an LDAP directory migration for a legacy enterprise application — identified tight schema coupling in existing code, and designed an SDK-based proxy layer that translated responses into the legacy-compatible format, avoiding a full application rewrite.
- Implemented strong authentication enforcement for privileged admin accounts using OIDC ACR values, and executed an OIDC migration across multiple applications handling complex role-tree traversal logic required by a hierarchical identity model.
- Built custom Liferay OSGi modules including REST API endpoints for paginated web content retrieval (used for NLP model training) and an Athena-backed sync feature for real-time Data Lake integration in a B2B portal.
- Unblocked a Liferay version migration by writing a k6 load-test script that replicated the browser-based OAuth/OIDC authorization flow for authenticated pages — succeeded where JMeter and other tools had failed; resolved performance bottlenecks through thread dump analysis and JVM tuning.

PROJECTS & OPEN SOURCE

Checkstyle – Open Source Contributions

Java • Checkstyle • GitHub

- Resolved ~20 reported bugs across the Checkstyle open source static analysis project during undergraduate studies.
- Delivered 1 feature enhancement, navigating a large production Java codebase and engaging with the maintainer community via GitHub pull requests.

Semantic Segmentation of Satellite Imagery

Python • PyTorch • U-Net • Vision Transformer (ViT)

- Final year BTech project: combined U-Net and Vision Transformer architectures to perform semantic segmentation on satellite images, leveraging U-Net's spatial precision with ViT's global context modeling.
- Authored a research paper documenting methodology, architecture design, and experimental results.

EDUCATION

B.E. / B.Tech – Computer Science

University of Calcutta

2018 – 2022 • Kolkata, India

CGPA: 8.68

TECHNICAL SKILLS

Languages & Frameworks

Java • Quarkus • Python
JavaScript • Shell Scripting

Platforms

Liferay • Cognitum

Databases

PostgreSQL • Oracle DB • LDAP

DevOps

GitHub Actions • Docker
Terraform • GitHub Container Registry

AWS

ECS • Lambda • ALB • IAM
Athena • S3 / Data Lake • EC2
Parameter Store

Performance & Testing

k6 • JMeter
Thread dump analysis • JVM tuning

CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon Web Services

AWS Certified Developer – Associate

Amazon Web Services

ACHIEVEMENTS

Client Star Award ×2

Accenture — recognition for outstanding client impact across two separate engagements.

STRENGTHS

Java & Backend Engineering

Deep expertise in Java / Quarkus, OSGi module development, LDAP/OIDC integrations, and large-scale enterprise application architecture.

CI/CD & Cloud Automation

End-to-end GitHub Actions pipelines, Terraform IaC, and AWS-native deployments across ECS, Lambda, and ALB.

Problem Solving

Delivered complex migrations (LDAP, Liferay, OIDC) with zero downtime and minimal disruption to production systems.

Open Source Contributor

Active Checkstyle contributor — resolved ~20 bugs and 1 feature, navigating a large Java codebase.
